

# ОТЧЕТ ПО 4 ЭТАПУ ИНДИВИДУАЛЬНОГО ПРОЕКТА

Добавить к сайту ссылки на научные и библиометрические ресурсы и  
посты

Коняева Марина Александровна

# Содержание

Цель работы	3
Задание	4
Выполнение лабораторной работы	5
Выводы	7

## Цель работы

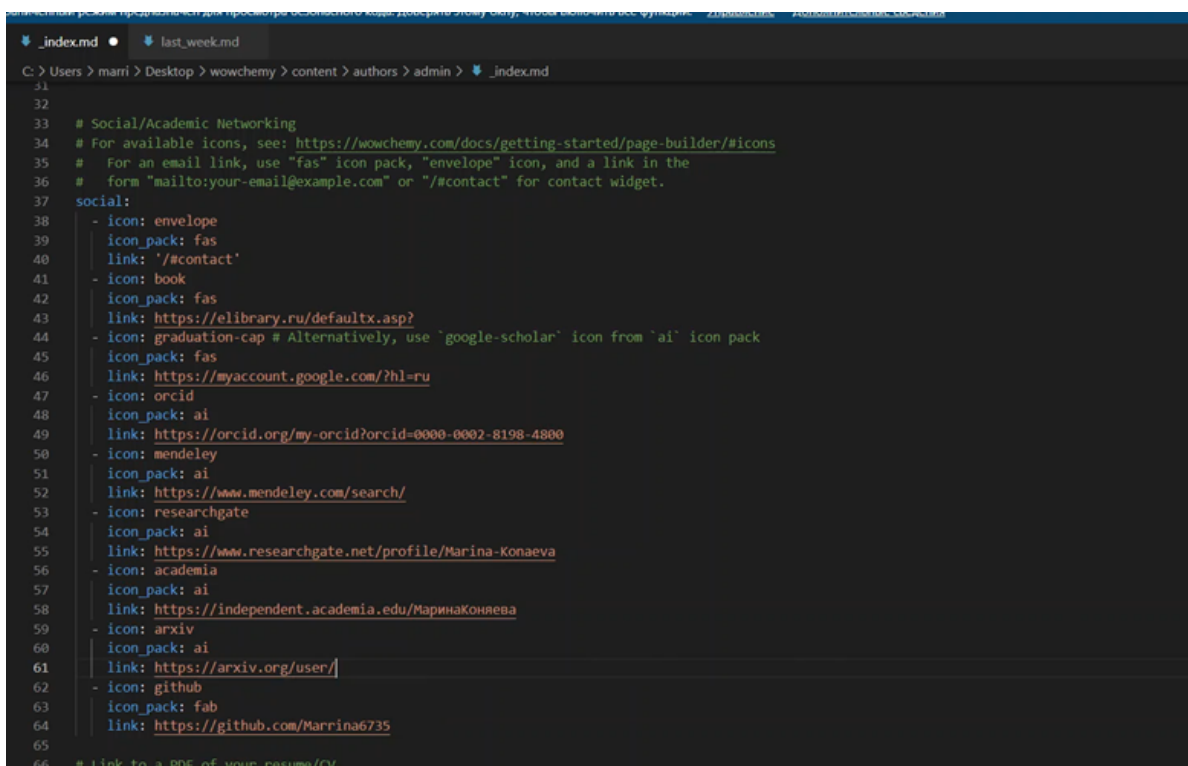

Добавить к сайту ссылки на научные и библиометрические ресурсы.

# Задание

1. Зарегистрироваться на соответствующих ресурсах и разместить на них ссылки на сайте: eLibrary : <https://elibrary.ru/>; Google Scholar : <https://scholar.google.com/>; ORCID : <https://orcid.org/>; Mendeley : <https://www.mendeley.com/>; ResearchGate : <https://www.researchgate.net/>; Academia.edu : <https://www.academia.edu/>; arXiv : <https://arxiv.org/>; github : <https://github.com/>.
2. Сделать пост по прошедшей неделе.
3. Добавить пост на тему: Работа с библиографией.

# Выполнение лабораторной работы

1. Добавим к сайту ссылки на научные и библиометрические ресурсы, зайдя в нужный файл и изменив там данные (Изображение 1.1)

```

31 # Working_with_bibliographies
32
33 When starting to search for information in bibliographic editions, one should know the basic rules of working with them. It is necessary to take into account that along
with some universal principles of material organization in such publications there are also specific features of each of them.
34
35 All bibliographic editions have a reference device:
36 - content (reflects the sections by which the material is grouped)
37
38 - auxiliary indexes (occur in various combinations depending on the edition).
39
40 The table of contents is used to work with the sections of the index. In this case, all the material included in a given section is looked through, and only the
literature that is relevant to the issue under study is written out. Such a search is recommended when the researcher cares not only about specific works on the topic,
but also about general literature, and when the researcher fears missing important information.
41
42 However, the most specific search, which avoids looking through redundant information, is considered to be the search with the help of auxiliary indexes. The main
auxiliary indexes are: name, author, subject, geographical, title index, etc.
43
44 The author index contains the names of the authors of the works reflected in a given issue of the index or abstract journal. By contrast, the name index includes not
only the names of authors, but also the names of translators, editors and personalities. The geographical index makes it easier to find information about materials in
the country, regional, and local history aspects. The index of titles includes the titles of works reflected in the bibliography. As a rule, subject (subject-thematic)
auxiliary indexes have a more complex structure. They consist of headings (main concepts) and subheadings (supplementing or clarifying the main concepts).
45
46 Auxiliary indexes are organized in alphabetical order; opposite each item there is a reference to the serial number of the bibliographic record in the index.
Of course, searching using bibliographic aids is professional information retrieval. It requires some training and practice. Not all topics require such an extended
literature search. Work with dictionaries, reference books, and encyclopedias is sufficient to disclose some topics. A number of other topics can be disclosed with the
help of information found in the alphabetical and systematic catalogs of the nearest library (district, city, university). But there are topics and questions for which
there is very little information, and one has to collect it using all search options. The broader the topic is formulated, the easier it is to find literature on it.
Accordingly, the narrower the topic, the more difficult it will be to select the necessary literature.
```

## Выводы

В ходе выполнения данного этапа индивидуального проекта добавили к сайту ссылки на научные и библиометрические ресурсы, а также создали посты.
